## Product Description

Acrylic Orthodontic Bionator Appliance Corrects Class II Malocclusion with Color Variety and Individualized

### Product Description:

The Bionator is designed to fit comfortably in the mouth and is made of a clear acrylic material that is easy to clean. It is a popular choice among orthodontists because it is removable and allows for easy adjustments.

One of the key benefits of the Bionator is its effectiveness in correcting Class II malocclusion. This is a common orthodontic problem where the upper teeth protrude farther forward than the lower teeth, resulting in an overbite. The Bionator works by encouraging the lower jaw to grow forward, which helps to correct the bite alignment and improve the overall appearance of the teeth.

The Bionator is also known for its ease of use. Unlike traditional braces, it can be removed for eating, brushing, and flossing, making it a convenient option for patients who lead busy lives. It is also less noticeable than traditional braces, which can be a major selling point for many patients.

While the cost of the Bionator varies depending on location and orthodontist, it is generally considered to be an affordable option for orthodontic treatment. It is also covered by many dental insurance plans, which can help to offset the cost.

### Features:

**Product Name:** Bionator Appliance

**Usage:** For Correcting Class II Malocclusion

**Treatment Time:** Varies Depending On Individual Case

**Maintenance:** Regular Cleaning And Adjustments By Orthodontist

**Components:** Upper And Lower Acrylic Plates, Metal Framework, Bite Pads

**Color:** A Lot Colors

### Technical Parameters:

Treatment Time	Varies Depending On Individual Case
Cost	Varies Depending On Location And Orthodontist
Age Range	Usually Used In Adolescents
Components	Upper And Lower Acrylic Plates, Metal Framework, Bite Pads
Material	Acrylic
Type	Orthodontic Appliance
Effectiveness	High Success Rate In Correcting Class II Malocclusion
Maintenance	Regular Cleaning And Adjustments By Orthodontist
Usage	For Correcting Class II Malocclusion
Function	Encourages Forward Growth Of The Lower Jaw And Corrects Bite Alignment

### Applications:

The Bionator Appliance is designed to be highly effective in correcting Class II Malocclusion, which is a common dental problem among children and adults. The appliance has a high success rate in correcting this condition, making it a popular choice among dental professionals and patients alike. The treatment time varies depending on individual cases, but the appliance is known to deliver excellent results in a relatively short time.

The Bionator Appliance can be used in various occasions and scenarios, including:

**Children with developing Class II Malocclusion:** The appliance can be used to correct the condition at an early stage, preventing further complications and improving the child's oral health.

**Adults with Class II Malocclusion:** The appliance can be used to correct the condition in adults, improving their oral health and enhancing their appearance.

**Post-orthodontic treatment:** The appliance can be used to maintain the results achieved through orthodontic treatment, preventing relapse and maintaining the patient's oral health.

**Patients with temporomandibular joint disorders:** The appliance can be used to alleviate the symptoms of temporomandibular joint disorders, improving the patient's quality of life.

In conclusion, the Bionator Appliance is a high-quality orthodontic appliance that can effectively correct Class II Malocclusion in both children and adults. The product is certified with ISO, CE, and FDA, ensuring its quality and safety. The treatment time varies depending on individual cases, but the appliance is known to deliver excellent results in a relatively short time. The product can be used in various occasions and scenarios, making it a versatile and reliable option for dental professionals and patients.
